

CELLULOSE CHEMISTRY AND TECHNOLOGY

Guide to Authors

The journal "*Cellulose Chemistry and Technology*" acts as a medium for the exchange of research in the area of natural macromolecular compounds, wood and annual plants. It covers the study and exploitation of the industrial applications of natural polymers in areas such as pulp and paper, textiles, wood, adhesives, pharmaceuticals applications and industrial chemistry.

Types of contributions: Original research papers; short communications; rapid communications; *Review* articles will be published following invitation from Review Editor or by the suggestion of authors. *Cellulose Chemistry and Technology* also publishes book reviews, conference reports and a calendar of the forthcoming events.

Submission of a paper implies that it has not been published previously (except in the form of an abstract or as part of a published lecture or academic thesis), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted it, will not be published elsewhere in the same form, in English or in any other language, without the written consent of the publisher.

Authors are requested to submit three copies of their original manuscript and figures, plus disk copy, to the Editor-in-Chief. Authors are requested also to submit with their manuscripts, the names and contact details (including e-mail address) of three potential referees.

Manuscripts must be typewritten, single-spaced with wide margins, on one side of white paper. A font size of 11 pt (Times New Roman, normal) is required. A corresponding author willing to handle correspondence at all stages of refereeing and publication, also post-publication, should be identified.

Text: Follow this order when typing manuscripts: Title, Authors, Affiliations, Abstract, Keywords, Main text, Acknowledgements, References, Tables, Figure captions. Do not import Figures or Tables into your text. Other than the cover page, every page of the manuscript, including the title page, references, tables etc. should be numbered; however, no reference should be made in the text to page numbers. Lines must be numbered consecutively throughout the text. The corresponding author should be identified with an asterisk.

Abstracts: A concise and factual abstract is required (about 100-150 words). The abstract should state briefly the purpose of the research, the principal results and major conclusions. An abstract is often presented separately from the article, so it must be able to stand alone. References should therefore be avoided, but if essential, they must be cited in full, without reference to the reference list. Non-standard or uncommon abbreviations should be avoided but, if essential, they should be defined at their first mention in the abstract itself.

Units: The SI system should be used for all scientific and laboratory data. In certain instances, it might be necessary to quote other units. These should be added in parentheses. Temperatures should be given in degrees Celsius.

Tables: Tables should be numbered consecutively and given suitable captions; each table should begin on a new page. Number tables consecutively, in accordance with their appearance in the text. Be sparing in the use of tables and ensure that the data presented in tables do not duplicate results described elsewhere in the article.

Illustrations: Photographs, charts and diagrams are all to be referred to as "Figure(s)" and should be numbered consecutively in the order to which they are referred. They should not be included

within the text. All illustrations should be clearly marked with the figure number and the author's name. All figures should have a caption. Captions should be supplied on a separate sheet.

References: All publications cited in the text should be presented in a list of references following the text of the manuscript. In the text, refer to references by a number as superscript (e.g.: other authors¹ mentioned that ...), and the full reference should be given in a numerical list in the end of the paper. References should be given in the following form: J. B. Mitton and M. C. Grant, Genetic variation and the natural history of quaking aspen, *Bioscience*, **46**, 25(1996); Moroishi, N., Chemical characterization of wood and its components, in "Wood and Cellulosic Chemistry", edited by D. N. S. Hon and N. Shiraishi, Marcel Dekker Inc., 1991, 331-394; K. C. Kairouz, and R.J. Heath, Fracture of ply drop-offs in composite structures, in Proceedings of ECCM-7 Conference, London, May, 1996, pp. 79-85.

- *Short Communications:* follow the same format as the full papers, except that the Results and Discussion sections should be combined. Manuscripts should not exceed 2000 words.
- *Rapid Communications:* Short Communication papers for publication on an accelerated schedule. They report highly significant new findings and indicate new directions of research.
- *Special Issues:* Proposals for Special Issues of full research papers that focus on a specific topic or theme will also be considered (ex: symposia, activity of Polysaccharides network).
- *Letters to Editor:* Readers are encouraged to write to any of the Editors and raise issues and concerns on the papers published in the journal. Editors or authors will answer the letters. Periodically, the Editors invite review articles.
